Installation Guide

Download the source file from the github repository.
Link - https://github.com/sriram3125/AIFA_assignment191918

After downloading the file, we did not include any header files(.h). So, no need to add anything to the headers or other files.

In a c++ compiler platform like Visual Code, Coding blocks, Eclipse having both editor and compiler combined. Open the file in the editor and click the run command, which will automatically compile and execute and wait for taking input. You can see input formats in the user Manual.

In a Terminal either microsoft or Linux OS.
In Microsoft Compiler -
  ● Get the required directory using - cd Downloads (if file was downloaded in Downloads).
  ● Write the command -> g++ source.cpp -o source.exe
  ● Then write -> source.exe
In Linux Terminal -
  ● Get the required directory using - cd Downloads (if file was downloaded in Downloads).
  ● Write the command -> g++ source.cpp -o source.exe
  ● Then write -> ./source.exe
